

VICEVERSE - Judge & Mentor Portal (Team 5)

Complete Workflow, System Architecture & Team Execution Plan | Lead: Annirudh M Jois | Members: Anish, Akul

Executive Summary: We are building Team 5's subsystem for the ViceVerse platform: the **Judge & Mentor Portal**. It powers login authentication, round navigation, Windows OS content-view team lists, team profile inspection, and real-time evaluation scoring.

1. Repository Scope & Team Boundaries

- **Dedicated Team Folder:** All Judge Portal frontend code resides in `JUDGE/`.
- **Shared Contracts:** Common UI/types in `SHARED/`, API routes in `BACKEND/`, schemas & seeds in `DATABASE/`.
- **Isolation Rule:** Do not touch other team directories (`ADMIN/`, `REGISTRATION_QR/`, etc.).
- **PR Hierarchy:** Member feature branch → PR to Annirudh's fork → Review & Merge → PR to Main Repository.

2. Tech Stack

Category	Technology
Frontend Framework	Next.js (App Router, React, TypeScript)
UI & Styling	Tailwind CSS + shadcn/ui
Database & Backend	Supabase PostgreSQL + Next.js REST API Handlers
Authentication	Custom PIN + Login ID Auth via Supabase <code>profiles</code>
Realtime Engine	Supabase Realtime (websocket sync)

Validation Zod

Deployment Vercel

3. User Flow & Role Separation

A. Login & PIN Verification

- **Login ID Format:** Exactly 3 uppercase letters followed by 5 digits (`^[A-Z]{3}[0-9]{5}$`).
- **PIN:** Numeric PIN passcode (e.g., 1234).
- **Role Branching:**
 - JDG***** (Judge): Full access. Can view rounds, inspect teams, enter marks, save drafts, edit, and submit final evaluations.
 - MNR***** (Mentor): Viewer access. Can browse rounds, view teams, and inspect Team Details. *The Evaluation tab and all scoring controls are frozen, inactive, and locked.*

B. Judge Dashboard

- **Rounds View:** Hackathon rounds displayed as interactive cards (e.g. Round 1, Round 2).
- **Teams Display (Windows Content View):** When a round is selected, all allotted teams appear in a clean horizontal row/card format displaying Team ID, Team Name, and an instant evaluation status badge:
 - Not Evaluated
 - Saved as Draft
 - Submitted (Evaluated)
- **Realtime Sync:** Status badges reflect changes immediately across the dashboard via Supabase Realtime without manual page refreshes.

C. Team Assessment Screen (Dual-Tab Interface)

Tab 1: Team Details (Judges & Mentors)

- Team Name & Team ID Header
- Members list with academic branch (CSE, AIML, etc.)
- Selected Domain (from database)
- Selected Case Study topic (from database)
- Canva Presentation link (clickable)
- Google Drive prototype link (if available)
- Organized, presentable card layout

Tab 2: Evaluation Scoring (Judges Only)

- Dynamic criteria fetched from database
- Columns: Criteria | Max Marks | Marks Allotted
- Grand Total calculation (Max vs. Obtained)
- **Save Draft:** Saves intermediate marks (editable later)
- **Edit:** Unlocks draft marks for adjustment
- **Submit:** Permanently locks evaluation
- *For Mentors:* Displays a disabled state with notice banner

4. Supabase Setup & Test Accounts

The complete SQL scripts, tables, RLS policies, and seed data have been generated in SUPABASE_STEPS.txt in the project directory.

Role	Login ID	PIN	Permissions
Judge	JDG10001	1234	Full Evaluation & Scoring (Draft / Edit / Submit)
Mentor	MNR20001	4321	Read-Only (Team Details only; Scoring frozen)

5. Task Breakdown for Team 5

1. **Database & Seeds:** Execute SUPABASE_STEPS.txt in Supabase SQL editor.
2. **Authentication Module:** Build Login screen validating Login ID pattern and PIN against Supabase.

3. **Dashboard:** Implement Rounds selector & Windows OS Content View with Realtime status listener.
4. **Dual-Tab Assessment:** Build Tab 1 (Team Details) & Tab 2 (Evaluation table, auto-total, Draft/Submit states, Mentor lock).
5. **Review & PR:** Verify end-to-end demo and submit PR to main repository.
